

Access key driver-based reporting with the addition of Driver ID

The Driver ID feature for RoscoLive allows fleet managers to easily identify drivers and understand driver behavior. Video, Routes, Events, and Reports can now be associated to specific drivers giving fleet managers and safety professionals better insights on safety trends and areas for improvement, and incentivizing good driving behavior.

The Driver ID feature is available for all RoscoLive users with DV6 dash cameras.

DV6 has built-in functionality where the driver-facing camera scans an ID card with a unique QR code for each driver. Once the scan is successful, the driver is linked to the video, route, and Events.

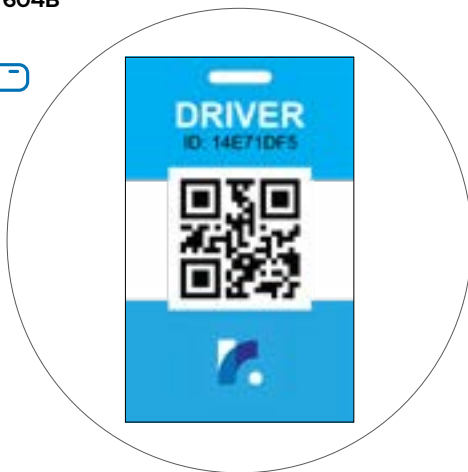

ID cards are ready and available for purchase with P/N: DV604B (Pack of 6 cards).

An alternate method for ID is through the **Rosco Driver App** - available for iOS and Android.

DV6 Driver ID

Driver Identification for Rosco DV6 with QR Code ID Cards (6 Pack)

P/N: DV604B

| DRIVER ID P/Ns | |
|----------------|------------------------------------|
| PART NO. | DESCRIPTION |
| DV604B | DV6 Driver ID QR Cards (Pack of 6) |
