

v2.30.0

API Release notes for RoscoLive v2.30.0

New Endpoints

The following are newly added endpoints

GET /profiles/{profile_id}/history

Returns a list of history objects for the given profile_id.

```
1  {
2    "meta": {
3      "code": 200
4    },
5    "response": {
6      "history": [
7        {
8          "company_id": int,
9          "configuration": string,
10         "configurationdv6": string,
11         "created_at": string,
12         "event_upload_types": string,
13         "id": int,
14         "profile_id": int,
15         "profile_version": int,
16         "user_id": int,
17         "user_name": string
18       }, {...}
19     ]
20   },
21   "result": "OK"
22 }
```

New User Role

Custom Partner (custom_partner)

This new role will have the same base permissions and access as a normal Partner user, but with the option to

customize the level of permissions and access the user has.

1. Must be a Partner user to be able to create a new Custom Partner user and edit their permissions. Custom Partner users cannot create other Custom Partner users and cannot edit their own or other's permission settings.
2. Custom Partners have the same access to view companies the same as a Partner user does.
3. All permissions for a Custom Partner apply to all companies that belong to the Partner company on RoscoLive.

Updated Endpoints

The following endpoints have been updated.

GET /partners/companies/{company_name}/events

Added a new query param:

| key | type | description |
|---------------------------------|--------------------|---|
| <code>exclude_device_ids</code> | array: optional | A list of device_ids which will exclude any events by those devices in the response |

GET /devices/{device_id}/replace_history

Endpoint now available to Partner users.

POST /devices/{device_id}/replace

Endpoint now available to Partner users.

PUT /reports/custom/add

Added `no_sd_card` field in available fields for a custom report.

GET /reports/custom/user/{email}

Added `no_sd_card` value to `fields` object in response.

PUT /companies/{company_id}/devices/file

Added additional column requirements of "tag_plate" and "ch3" in CSV file for bulk device creation.

PUT /partners/companies/{company_name}/devices

Added additional object values for the `sn` form-data object:

| key | type | description |
|-----|------|-------------|
|-----|------|-------------|

| key | type | description |
|------------------------|-------------------|---|
| <code>tag_plate</code> | string: optional | The license plate / tag number of the vehicle |
| <code>ch3</code> | boolean: optional | Flag to enable/disable ch3 in the camera settings upon creation |

POST /users/updatenotifications/email

Added `alert_no_sd_card` to available form-data values

Updated Objects

The following objects have been updated.

Devices Object

Added the following fields to object.

Added

| key | type | description |
|----------------------------------|---------|--|
| <code>disable_live_stream</code> | boolean | flag for disabled live stream for device |
| <code>no_sd_card</code> | boolean | flag for if no SD card alert is detected for device. Requires the "no_sd_card" value to be passed in the <code>include_data</code> query param to be returned. |
